

*"Coccyx" is the Latin name of the tailbone. This seat is for anyone who requires extra good relief of the tailbone and the spinal column.*

Our Coccyx seat greatly reduces the pressure on the tailbone and spine due to a cavity in the foam in the central rear part of the seat.

The seat is based on our comfortable and stable moulded foam seat. The fabrics are carefully chosen so that the appearance of the seat does not stand out in comparison to our other models, without compromising the function.

The Coccyx seat is, as a standard, available in black fabric for Malmstolen Individual 4000, 7000 and Adaptive 6000.

*Beneath the fabric, part of the foam is removed to relieve the tailbone.*

*The tailbone is floating over the cavity while the sit bones have good support.*
